                                                                                                                                                                                                                      coligo dT selection. CDNA library preparation was with the BRL/Life Tech. Superscript Plasmid system. An oligo-dT NotI primer for first strand synthesis generated geggegecc(t) at the 3' end of the clones. A 5' Sall adaptor was used with sequence 5'-gtcgacccacgcgtccg-3'. Resulting cDNAs were size selected (average size 2 kb). NotI digested, and ligated into NotI/Sall-cut pSPORTI. Library was constructed by Dr. Manfred Gessler."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 GAGAGTTTCTTGCTCCTCTCCTGCACAACCGCCTGCGCAGCTGGGTCCAGCCCCTGCG 120
